XA - C1985-070946

XIC - C09D-011/00

AB - J60092370 The compsn. includes mixed alcohols or alcohols and ketones
as major essential ingredients, plus binder, colouring material,
electroconductive agent lithium nitrate (lithium acetate), soluble
organic acid lithium salt, rust-preventive agent (more than 0.1 mol as
against 1 mol of lithium nitrate), surfactant, more than 20 vol.% of
solvent or 50 vol.% more methanol and/or ethanol than the above
mentioned soln. solvent and less than 10 vol.% of water compared with
the solvent.

- ADVANTAGE - On the printed surface of a non-treated steel plate, the
compsn. does not generate any rust around the printed character.

- In an example, solvent soln. comprised cyclohexanone,
methylisobutylketone and ethanol. Binder included rosin-modified
glycerin, ester Harvester-L Kashu resin-17BB and also acrylic
polymethyl with 35,000 av.mol. wt. Dyestuff included oil black-HBB
Pigment was titanium oxide Electroconductivity agent was lithium
nitrate or lithium benzoate.
